Vision Statement

Game Sector's goal is to create a strategic game that is fun, fair, and accessible to all players. We aim to prove that games can be engaging without pay-to-win games, manipulative design, or invasive data collection. Our idea grew from our experiences as gamers who value transparency and player trust. We're committed to protecting user data and promoting skill-based, ethical gameplay that supports player well-being. Ultimately, we want to influence the gaming industry toward fairer, healthier, and more inclusive design practices.

Ethics Policy

- We reject manipulative mechanics like pay-to-win, loot boxes, and power-creep releases.
- Competitive fairness is prioritized over profit-driven design.
- Players should never feel pressured to spend money to stay competitive.
- Our approach challenges harmful industry norms and respects player time, money, and skill.

Cultural Policy-Core Values

- We build our company culture around fairness, transparency, and long-term player trust.
- Every design choice centers the player's well-being, not profit-driven manipulation.
- We communicate openly about systems like matchmaking, data use, and monetization.
- Our goal is to create a studio culture that treats players with respect and supports ethical, inclusive game design.

Ethics Board Member

Mikko Hypponen

- He is the Chief Research Officer at F-Secure in Finland, where he has led responses to major global virus outbreaks
- His team helped take down the worldwide network behind the Sobig.F worm and warned the world about the Sasser outbreak
- He is known for being an outspoken advocate for digital privacy, especially in response to government surveillance programs like the NSA's

OKR 2

- **Objective:** Develop strong data-privacy practices that minimize unnecessary data collection and keep players clearly informed about how their information is used.
- **Metric:** Achieve at least 90% player comprehension on the data-transparency pop-up during usability testing, showing that players understand what data is collected, why, and how it's stored.
- **Ethical Impact:** If the pop-up is unclear, players—especially younger ones—could give uninformed consent or misunderstand how their data is handled, creating privacy and trust concerns.
- **Ethical Safeguard:** Use a short, plain-language pop-up that explains what data is collected, why it's needed, and opt-out options. Revise and retest if comprehension falls below 90% to ensure informed consent and transparency.
